Calle Real, N.24, 29130 Alhaurín de la torre (Málaga), Spain

/** Why do I believe I am the ideal candidate for Spotify? */ Because, I feel real passion for making easier other's life, and music is a fundamental part of my passion, thrilling, motivating and inspiring me to do great wonders, what better way to make that passion my goal with Spotify? If I get selected, you will count with a very high-motivated engineer who loves new challenges, perfection and always willing to learn. I am not scared by failure or complex work, I am only scared by working in something what doesn't make me feel fulfilled, and that is the reason you are reading these words, because I want to be part of this mission, giving everyone the opportunity to access all the music anytime.

/** EXPERIENCE */

Programmer Analyst (previously, Full Stack developer) in TechKovery – Since 2016

Since I started in this start-up, I led and conceived projects that allowed the international expansion of the company, becoming the largest library software company in Spain. These applications allowed to simplify the way of working of many people, being able for first time to manage RFID tags regardless of the format, reader or device. I have also been the responsible of a project that allows to manage large quantities of items in the cloud in a fast, reliable and secure way.

Thank to my work, projects and geek curiosity, my main skills are:

- Proficient in C++, Java and JavaScript with high exposure to C#
- Used to manage NoSQL (MongoDB) and SQL (MySQL, SQLite) databases
- Experience developing production ready applications for desktop, mobile and web (Node.js and React.js)
- I deeply care about interface, making it always as beautiful and friendly as possible
- I love to write state-of-the-art code that is easy to read and maintain
- Passionate about high end software developments and improving customer experience

/** PROJECTS */

Wikiuma.com – https://bit.ly/2CW95Wm

It's a portal where to share evaluations of subjects and professors of the university where I studied. It has had a great reception among all the students and professors of the university, receiving evaluations almost every day.

You can read some press articles here https://bit.ly/2vx9auy and https://bit.ly/2KENS2A.

QPlan.it – https://bit.ly/2pYscH4

It's a system with a frontend and public API that facilitates the schedule planning of events, solving the scalability problems of solutions like Doodle. It was a project that I considered necessary to carry out and I did it as my final degree project, allowing me to graduate with honors. Later I continued its development and published it in GitHub (repository link: https://bit.ly/2AjtUZB) so that anyone can benefit from it.

AEGEE-Málaga

AEGEE is one of the biggest interdisciplinary student organizations striving for a democratic, diverse and borderless Europe and I have been part of the team that founded AEGEE-Málaga as IT responsible and later president of the association. It has allowed me to organize national and international events with a team, such as Europe on the Track (press article: https://bit.ly/2J99RQk) and participate in various cultural exchanges.

/** SKILLS */

I consider myself enthusiastic, self-taught and with a "never settle" personality, so I like to pay attention to the details in order to be proud of my work. It doesn't scare me to face new technologies, situations or development teams, I love it, that's the best way to develop myself and to know wonderful things.

/** EDUCATION */

Software Engineering – Bachelor's degree at "Universidad de Málaga (UMA)"

Graduated with honours due to my final project, I have been studying from 2013 to 2018, having spent the last year as full stack developer in one of the most important library management software companies in my country, as well as developing my linguistic skills in English through commercial contacts with foreign clients and cultural exchanges throughout Europe.
